

# [Workshop 11] Javascript - Objects 4 & Scoping

Brainster Web Development Academy

# Table of contents

**01** Exercise 01

**02** Exercise 02

**03** Exercise 03

**04** Exercise 04

# Intro

For this week's workshop, you will need to work on four different exercises and implement the JavaScript Date object and classes that you learned during the week.

## Exercise 01

- Use the starter files for this exercise and see screenshot1 as a reference.
- Create a JavaScript class *CountdownTimer* with a constructor that accepts the target event date and DOM elements for displaying the countdown
- Within the class create method *updateCountdown* to calculate the time left until the event and update the corresponding DOM elements.
- In the class constructor, use *setInterval* to call the *updateCountdown* method every second
- Add a *resetTimer* method to the class for changing the event date based on user input

## Exercise 02

- Use the starter files for this exercise and see screenshot2 as a reference.
- Get the user name from the input and create a custom function *updateGreeting* so that you can greet the user based on the current time:
  - If the time is between 5 (included) and 12 (not included), greet Good morning
  - If the time is between 12 (included) and 18 (not included), greet Good afternoon
  - Otherwise greet Good evening

## Exercise 03

- Use the starter files for this exercise and see screenshot3 as a reference.
- Get the user birthdate from the input and create a custom class *AgeCalculator* that initializes with the birthdate of the user:
  - Add method *calculateAge* to calculate how old the user is in years, months and weeks
  - Add a function *displayAge* that shows the age of the user in years, months and weeks as calculated in the method of the class

## Exercise 04

- Use the starter files for this exercise and see screenshot4 as a reference.
- Allow the user to select one of the timezones from the dropdown.
- Create a custom function *updateClock* that shows the current time in the selected timezone by the user

## Break a leg!

If there is not enough time, try to finish the exercises at home.
