

Challenge 04 - Specification

For this challenge, you will solve a 3 tasks that focus on JavaScript events and objects we have learned up until now.

Description

Create a personalized study timer with a visual progress bar, where users can set up personalized study sessions with breaks. The application should visually display the progress of each session using a progress bar.

Task 1:

Create a function to get from the user input the study and break duration in minutes. Save the study duration and break duration on local storage. Persist the study and break duration in the local storage upon refresh.

Task 2:

Use JavaScript timers (*setTimeout* and *setInterval*) to count down the session and break durations. Show the progress via a dynamic progress bar that fills up as the time for the study session or break elapses.

Task 3:

Notify the user via a simple alert when it's time to take a break and when to resume studying.

Task 4: (BONUS)

Display a log of completed study sessions and breaks including their durations. *Hint: Use LocalStorage.*

Evaluation system

1 point	- For solving one task out of the three
3 points	- For solving two tasks out of the three
5 points	- For solving all three tasks
3 extra points	- For solving bonus task

Deadline

1 week after its presentation, at 23:59 (end of the day).
