# Intro

For this week's workshop, you will need to work on ten different exercises and implement the JavaScript events & objects that you learned during the week.

## Exercise 01

- There is a html starter file for this exercise.
- When the button is clicked, it should change the background color of the page to a random color every 3 seconds.
- Use *setInterval* for the color change.

## Exercise 02

- There is a html starter file for this exercise.
- Build a countdown timer that starts from 60 seconds and goes down to 0.
- Include start, pause and reset buttons.
- Use *setTimeout* or *setInterval* for the countdown logic.

## Exercise 03

- There is a html starter file for this exercise.
- Whenever the user enters text into the input field and presses the button, add the text to an unordered list on the page.
- Include a 'Clear List' button to empty the list.

## Exercise 04

- There is a html starter file for this exercise.
- Make a JavaScript function that logs all keyboard events.
- Display the last pressed key's character and its keycode in the page.

## Exercise 05

- There is a html starter file for this exercise.
- Create an image carousel with auto-play and pause functionality.
- Each images automatically switches every 5 seconds.
- Include buttons to manually switch to the next or the previous image.
- Include a button to pause/resume the auto-play feature.

## Exercise 06

- There is a html starter file for this exercise.
- Collect the information from the form: name, email and short bio.
- When the user presses Submit, display this information on the page in a card below the input fields.
- Store the information in a JS object.
- Use the following style for display:
  - `<div class="card">`
  - `<div class="card-body">`
  - `<h3 class="card-title">${profile.name}</h3>`
  - `<p class="card-text">Email: ${profile.email}</p>`
  - `<p class="card-text">Bio: ${profile.bio}</p>`
  - `</div>`
  - `</div>`

## Exercise 07

- There is a html starter file for this exercise.
- Design a simple quiz where the questions are stored in an array of objects.
- Display one question at a time and allow the user to select an answer.
- Show the Next button to proceed to the next question.
- Show if the answer to the selected alternative in an alert 'Correct' or 'Wrong'
- Show Quiz Completed when reaching the end of the quiz questions.

## Exercise 08

- There is a html starter file for this exercise.
- Create a gallery of images where each image has associated tags or categories that are stored in an array of objects.
- Implement filter buttons to display only images that match a certain category.

## Exercise 09

- There is a html starter file for this exercise.
- Build a simple todo application where each task has a description and a priority level.
- Based on the priority level of the tasks in the ToDo list, always show the highest priority tasks first in the list.
- Create a custom function to add a new todo to the list.

## Exercise 10

- There is a html starter file for this exercise.
- Create a simple currency converter application.
- In the starter file, there is an object that stores the different currencies rates relative to a base currency.
- Allow the user to input an amount, select a currency to convert from and to and display the converted amount.

## Break a leg!

If there is not enough time, try to finish the exercises at home.
